

The AI Act Fix Kit

Reference: EU AI Act Article 50 Disclosure Patterns

2026 Edition. Your personalized disclosure text lives live on clickcoded.com, written with your business name -- this file is the backup reference: every pattern, every citation, every placement note, in one place.

The AI Act Fix Kit - 2026 Edition

Copy-paste disclosure text for EU AI Act Article 50, scoped to the case the free check identified for you. Sources cited throughout - check liability-accuracy-framework-ai-act-fix-kit-2026-07-28.md §A/§D for the full research trail.

This is legal information, not legal advice, and not a substitute for a lawyer. It covers straightforward deployer disclosure cases under Article 50 of Regulation (EU) 2024/1689. If your situation is complex or high-risk, talk to a lawyer instead - the free check should already have told you that, and if you're reading this section anyway, stop and do that first. No purchase creates a lawyer-client relationship with anyone.

Buying this kit does not make you compliant. Putting the right disclosures in place does. This shows you which ones are yours and gives you the exact words.

1. If you're a deployer of a customer-facing chatbot (Article 50(1))

Informing people they're talking to an AI is a *provider* duty by the letter of the Act - but as the deployer actually running the chatbot in front of your customers, you're the one who has to make sure the disclosure actually reaches them. Practically, that means:

Minimum viable disclosure, placed where the conversation starts, before or at first interaction:

"You're chatting with an AI assistant, not a human team member. [Reach a person] any time by [emailing/calling X]."

If your chatbot could plausibly be mistaken for a human (natural voice, no obvious "bot" branding),

the disclosure needs to be unmissable, not buried in a footer or terms page - first message, not tenth. Article 50(1)'s "obvious to a reasonably well-informed, observant and circumspect person" exemption is a narrow one; when in doubt, disclose explicitly rather than relying on it.

Placement checklist:

- ☐ Disclosure appears at or before the first message exchanged
- ☐ Plain language, not buried in a ToS/privacy policy link
- ☐ A real path to a human is stated, not just implied
- ☐ Disclosure is accessible (readable by screen readers, not an image-only banner) - per Article 50(5)

2. If you're a deployer publishing AI-generated/manipulated images, video, or audio ("deep fakes") (Article 50(4), first sub-paragraph)

Standard disclosure, placed adjacent to the content itself (caption, overlay, or metadata - not just a separate policy page):

"This [image/video/audio] was created or modified using AI."

If the content is clearly artistic, fictional, satirical, or entertainment (not presented as documentary/real), the law allows a lighter version - disclosing that AI-generated content exists somewhere in the work, in a way that doesn't ruin the experience of it:

"This piece uses AI-generated or AI-modified [imagery/audio/video] as part of its creative content."

This lighter version is a real exemption category, not an escape hatch - it only applies where the artistic/satirical framing is genuine and evident, not asserted after the fact to avoid disclosure.

Placement checklist:

- ☐ Disclosure sits with the content, not just in a general site policy
- ☐ Machine-readable marking is present if you have the tooling for it (see §4 below) - this is a good-practice layer, not a substitute for your text disclosure
- ☐ If claiming the artistic/satirical exemption, the framing is genuine, not a workaround

3. If you're a deployer publishing AI-generated or AI-assisted text on matters of public interest, with no human editorial review (Article 50(4), second sub-paragraph)

(If a real person reviewed this content and holds editorial responsibility for it before publication, you're likely exempt under this same paragraph - see §5 before using this disclosure. Also check: is this text actually "published with the purpose of informing the public on matters of public interest"? Ordinary marketing/product copy usually isn't - see §5.)

Standard disclosure, placed at the top or clearly alongside the piece:

"This article/piece was generated or substantially written using AI, without human editorial review."

Placement checklist:

- [] Disclosure is visible before or at the start of the content, not buried at the bottom
- [] Language is plain - "AI-assisted" is honest only if a human genuinely shaped it; "AI-generated" is the honest term if a human didn't meaningfully edit it

4. Voluntary machine-readable labeling snippet (good-practice layer, deployer-side)

This does NOT by itself satisfy a provider's Article 50(2) marking duty - that duty is embedded in the AI system's own output pipeline and belongs to whoever built the generation tool, not to you as a deployer pasting a snippet onto a page. What follows is a voluntary, honest good-practice addition for content you publish:

```
<!-- AI-content disclosure metadata - voluntary good-practice marking, not a substitute
for a provider's Article 50(2) technical marking obligation. -->

<meta name="ai-generated" content="true">
<meta name="ai-disclosure" content="This content was created or modified using AI. See visible
disclosure above.">
```

If your publishing platform supports C2PA content credentials, that is currently the most robust machine-readable option - implementation varies by tool and the relevant EU-level codes of practice are still maturing (Article 50(7)); this snippet is a floor, not a ceiling.

5. Are you actually exempt? Check before disclosing anything

Public-interest scoping (Article 50(4), second sub-paragraph): the text-disclosure duty only reaches content "published with the purpose of informing the public on matters of public interest" - news, analysis, commentary. Ordinary marketing copy, product descriptions, how-to content, and most small-business blog posts likely never trigger this paragraph at all. If that's you, you may not need §3 above.

Human review/editorial responsibility exemption (same paragraph): if a named person reviewed the AI-assisted text and holds editorial responsibility for its publication, the disclosure duty in §3 doesn't apply. If your process changes and human review stops happening, this exemption stops applying too - worth a standing internal note, not a one-time check.

6. One-page plain-English summary (for your own files, or to hand to whoever manages your site)

Customer-facing chatbot

Disclose it's AI -- where: First interaction [50(1)]

AI deep fakes (image/video/audio) you publish

Disclose it's AI-generated/modified -- where: Adjacent to content [50(4) ¶1]

...and it's clearly art/satire/fiction

Lighter disclosure -- where: Somewhere in the work [50(4) ¶1 exemption]

AI text on matters of public interest, no human review

Disclose it's AI-generated -- where: Top of the piece [50(4) ¶12]

...but a named person reviewed it editorially

Likely exempt [50(4) ¶12 exemption]

Marketing/product copy, not public-interest text

Likely not covered at all [scoping, 50(4) ¶12]

Your own branded AI system (not off-the-shelf)

You may be a *provider* too - talk to whoever built it or a lawyer for the marking duty (50(2)) [50(1)-(2)]

Emotion recognition / biometric categorization

Talk to a lawyer - this kit doesn't cover it [50(3) + broader Act]

Sources: Article 50 text verified against the European Commission's AI Act Service Desk (ai-act-service-desk.ec.europa.eu/en/ai-act/article-50), raw paragraph-by-paragraph read, 2026-07-28. Penalty tier (Article 99(4)(g), 99(6)) verified the same way against artificialintelligenceact.eu. Full research trail: ventures/guide/liability-accuracy-framework-ai-act-fix-kit-2026-07-28.md.

2026 Edition. Errors found get corrected publicly and buyers get the updated file free - this is a living document, not a one-time PDF that goes stale the day the law's guidance evolves.
